

LINKEDIN POST ARCHITECTURE

Writing inside LinkedIn?

Why your posts break.

You draft clean technical insights. LinkedIn's editor strips your spacing into an unreadable wall of text.

Becher Zribi · Automation Engineer

Just now ·

Most developers do not have an AI problem. They have an input problem. When coding you think in fast thoughts: 1. FastAPI endpoint 2. Postgres filter 3. Avoid crashes...

----- The 140-Character Cutoff (Trapped behind "...see more") -----

[...see more]

Line Collapse

Spacing stripped

Broken Lists

Numbering fails

Zero Styling

No native bold

**THE ALGORITHM PENALTY**

3 silent flaws that kill your post's feed reach.

LinkedIn's 360Brew algorithm measures dwell time. Formatting friction makes readers scroll away in under 2 seconds:

01**The 140-Character Fold****-80% Reach**

If your hook does not trigger a "...see more" click, algorithmic dwell time drops to zero instantly.

02**Whitespace Collapse****Bounce in <2s**

Dense paragraphs without whitespace cause readers to bounce before discovering your technical takeaway.

03**External Links in Post Body****-40% Penalty**

Placing external URLs directly in your post body triggers algorithmic feed suppression. Links belong in comments.

THE DUAL ENGINE

Auto-Format vs. AI Formulate.

Pick the right engine.

ScrollStop gives you two dedicated tools for two distinct writing workflows:

⚡ 1-Click Auto-Format

Offline · 0s · Deterministic

Keeps 100% of your exact words

RAW USER DRAFT

UNFORMATTED

Why APIs Fail
// Lines collapse on mobile
1. Timeout latency
2. Payload spikes
4. Stale cache

FORMATTED RESULT

✓ READY

Why APIs Fail
1. Timeout latency
2. Payload spikes
3. Stale cache (auto-renumbered)

When to use: You already wrote your post and need instant mobile spacing & bolding.

🧠 Gemini AI Formulate

Gemini Flash · 360Brew MoE

Idea to structured draft

3 ROUGH BULLETS

INPUT

• hate repetitive tasks
• linkedin editor breaks
• built scrollstop to fix it

SYNTHESIZED POST

🔥 HIGH REACH

I hate repetitive manual work.
Especially on LinkedIn.
So I built ScrollStop:
• ⚡ Auto-Format engine
• 🧠 Gemini AI Formulate

When to use: You have raw thoughts and need a structured high-reach hook.

RULE Finished draft? **Auto-Format**. Rough thoughts? **AI Formulate**.

REAL TRANSFORMATION

The exact same post, transformed in 1 second.

From raw unreadable draft to an algorithm-optimized post ready to publish:

BEFORE: RAW DRAFT IN LINKEDIN

Poor Reach

Most developers don't have an AI problem. When coding you think fast: 1. FastAPI 2. Postgres filter 3. Avoid crashes. Paste directly and models hallucinate...

✗ Dense block · ✗ No bold headers · ✗ Hook cut off

AFTER: 1-CLICK SCROLLSTOP

✓ 98% Reach Score

Most developers don't have an AI problem.

When coding, we think fast:

1. FastAPI endpoint
2. PostgreSQL duplicate filter

✓ Hook isolated · ✓ Mobile spacing preserved · ✓ Clean lists

FEED LINTER & SIMULATOR

Audit your post cutoff before you hit publish.

Every draft is audited in real time against verified 360Brew feed ranking signals:

● Mobile Feed Simulator

Score: 98/100

Most developers do not have an AI problem.

140-char fold cutoff

When coding, we think in fast thoughts...

✓ Optimal

Opening Hook

< 14 words

✓ Safe

Whitespace

No collapse

✓ Clean
